BAHMET 24/10B

BAHAMAS PUBLIC FORECAST

BAHAMAS PUBLIC FORECAST FOR THIS AFTERNOON AND TONIGHT AND THE NEXT SIX (6) DAYS, ISSUED BY THE BAHAMAS DEPARTMENT OF METEOROLOGY AT 12:00 P.M. EDT, WEDNESDAY, MARCH 11, 2026. THE NEXT SCHEDULED FORECAST WILL BE ISSUED AT 6:00 P.M. EDT.

WARNING IN EFFECT:	***There are no public warnings in effect at this time. For additional marine information, please view our Marine forecast on our website, met.gov.bs.***
GENERAL SITUATION:	A few showers are still possible especially during the afternoon hours, due to the presence of low level moisture. Otherwise, a rather warm and stable weather pattern continues, as a deep layered ridge and dry air mass remains firmly anchored across the Bahamas. ***Outlook:*** Generally dry conditions, warm temperatures, and gentle to moderate breezes will persist over the majority of the country through the remainder of the work week as high pressure and a relatively dry air mass remain in place. By late Thursday, the northern half of the country will experience increased cloud cover as well as elevated shower and thunderstorm chances as moisture associated with a prefrontal trough enters the area. The frontal boundary will stall and gradually weaken near the Northern Bahamas through the weekend, maintaining an elevated chance of showers over that region.
SPECIAL WEATHER NOTES:	**Rip Currents*:*** There remains a **moderate** of rip currents for all east and southeast coastal waters in the Central & Southeast Bahamas. There is a slight risk of rip currents elsewhere across the island chain. **UV Index:** Higher UV levels are expected today across the island chain. Therefore, ***the public is urged to remain hydrated, wear protective clothing, such as wide-brimmed hats, sunglasses, and sunscreen, and to seek shaded areas during peak daylight hours.***
