Time Difference

To determine the time of high water or low water at any station listed in this table, given in the columns headed "Differences", are times in hours and minutes to be added to or subtracted from the time of high or low water at some reference station. A plus (+) sign indicates that the tide at the subordinate station is later than at the reference station and the difference should be added; a minus (-) sign indicates that it is earlier and should be subtracted.

To obtain the tide at a subordinate station on any date, apply the difference to the tide at the reference station for that same date. In some cases, however, to obtain an a.m. tide, it may be necessary to use the preceding day's p.m. tide at the reference station; or to obtain a p.m. tide, it may be necessary to use the following day's a.m. tide.

Special Moon Events 2023

Micro Full Moon: 06th January

Super New Moon: 21st January

Micro Full Moon: 05th February

Super New Moon: 20th February

Black Moon: 30th April

(2nd Second New Moon in a single calendar month)

Super Full Moon: 01st August

Micro New Moon: 16th August

Super Full Moon: 30th August

Blue Moon: 30th August

(2nd Second Full Moon in a month)

When the **Full Moon** or **New Moon** occurs near the point in the Moon's orbit closest to the Earth, (its **perigee**), is called a **Super moon**.

A **Micro moon** occurs when a **Full Moon** or a **New Moon** coincides with **apogee**, the point in the Moon's orbit farthest away from Earth.

There are two different definitions for a **Blue Moon**. A seasonal **Blue Moon** is the third Full Moon of an astronomical season that has four Full Moons. A **monthly Blue Moon** is the second Full Moon in a calendar month with two Full Moons.

There are several definitions of a **Black Moon**. It can be the **third New Moon** in an astronomical season with **four New Moons** or the **second New Moon** in the same calendar month occurs when there are **two New Moons** in a single calendar month.
