Time Difference

To determine the time of high water or low water at any station listed in this table, given in the columns headed "Differences", are times in hours and minutes to be added to or subtracted from the time of high or low water at some reference station. A plus (+) sign indicates that the tide at the subordinate station is later than at the reference station and the difference should be added; a minus (-) sign indicates that it is earlier and should be subtracted.

To obtain the tide at a subordinate station on any date, apply the difference to the tide at the reference station for that same date. In some cases, however, to obtain an a.m. tide, it may be necessary to use the preceding day's p.m. tide at the reference station; or to obtain a p.m. tide, it may be necessary to use the following day's a.m. tide.

Special Moon Events 2024

Super New Moon: 09th January

Micro Full Moon: 24th February

Super New Moon: 10th March

Micro Full Moon: 25th March

Super New Moon: 08th August

Blue Moon: 19th August
(3rd Full Moon in a season with four Full Moons)

Super Full Moon: 17th September

Micro Full Moon: 02nd October

Super New Moon: 17th October

Black Moon: 30th December
(3rd New Moon in a single calendar month)

When the **Full Moon** or **New Moon** occurs near the Moon's closest approach to the Earth, (its **perigee**), is called a **Super moon**.

A **Micro moon** occurs when a **Full Moon** or a **New Moon** coincides with **apogee**, the point in the Moon's orbit farthest away from Earth.

There are two different definitions for a **Blue Moon**. A seasonal **Blue Moon** is the third Full Moon of an astronomical season that has four Full Moons. A **monthly Blue Moon** is the second Full Moon in a calendar month with two Full Moons.

There are several definitions of a **Black Moon**. It can be the **third New Moon** in an astronomical season with **four New Moons** or the **second New Moon** in the same calendar month occurs when there are **two New Moons** in a single calendar month.
