

BAHAMAS PUBLIC FORECAST

BAHAMAS PUBLIC FORECAST FOR THIS AFTERNOON, NIGHT AND THE NEXT SIX (6) DAYS, ISSUED BY THE BAHAMAS DEPARTMENT OF METEOROLOGY AT 12:00 P.M. EDT, FRIDAY, APRIL 10, 2026. THE NEXT SCHEDULED FORECAST WILL BE ISSUED AT 6:00 P.M. EST.

WARNING IN EFFECT:	<p><i>A Near Gale Warning (28-33 knots) remains in effect for the Northern, Northwest and Central Bahamas. Occasional gusts to near-gale force are likely across these areas. Boaters, especially small craft operators, are urged to seek safe harbour and remain in port.</i></p> <p><i>For additional marine information, please view our Marine Forecast at met.gov.bs.</i></p>
GENERAL SITUATION:	<p>Fresh to strong breezes and rough seas are associated with a building high pressure system and a late season frontal boundary that will meander across the Central and Southeast Bahamas through tonight. Low-level moisture is supporting quick passing showers throughout the islands.</p> <p>Outlook: The frontal boundary will continue to weaken as it drifts across the southern islands tonight. The front is expected to stall, keeping shower chances elevated over that area through the weekend and into next week. Elsewhere, more stable conditions will prevail as a dry air mass filters into the area accompanied by a ridge of high pressure. Expect very breezy to windy conditions across the island chain over the weekend and well into the upcoming week.</p>
SPECIAL WEATHER NOTES:	<p>Rip Currents: There is a high risk of rip currents for all Atlantic coastal waters and passages across the entire island chain. <i>Swimmers are advised to refrain from entering these waters and to exercise extreme caution when crossing the Glass Window Bridge on the island of Eleuthera until further notice.</i></p> <p>On Shore Flooding: There is a moderate to high risk of on shore salt water inundation across the island chain. Wind driven waves and northeast sea swells are expected to drive 8 to 11 feet waves at about 10 seconds onto Atlantic exposed shores.</p>
