

BAHAMAS PUBLIC FORECAST

BAHAMAS PUBLIC FORECAST FOR THIS AFTERNOON, NIGHT AND THE NEXT SIX (6) DAYS, ISSUED BY THE BAHAMAS DEPARTMENT OF METEOROLOGY AT 12:00 P.M. EST, SATURDAY, FEBRUARY 28, 2026. THE NEXT SCHEDULED FORECAST WILL BE ISSUED AT 6:00 P.M. EST.

WARNING IN EFFECT:	<i>There are currently no public warnings in effect at this time. For additional marine information, please view our Marine forecast on our webpage, met.gov.bs.</i>
GENERAL SITUATION:	<p>High pressure retains its hold across the Bahamas today, but will surrender its position across the Northern islands tonight while a cold front moves into the area. Meanwhile a low level trough west of the islands is generating showers over the area.</p> <p>Outlook: The associated front is anticipated to reach the Central Bahamas early Monday before it stalls and dissipate. High pressure is forecasted to build across the archipelago by mid-week producing moderate to strong breezes and rough seas. Lingering moisture from an area of low pressure that build across Hispaniola will generate evening showers over the Southeast islands each evening. Boating and beach conditions will remain generally favorable over the next few days, with conditions expected to deteriorate early next week, as winds strengthen and seas become rough from Tuesday through Saturday. Another frontal boundary is expected to move into the area early next week.</p>
SPECIAL WEATHER NOTES:	Rip Currents: There is a slight risk of rip currents for the Atlantic coastal waters for all areas. <i>Swimmers are advised to exercise caution when entering these waters.</i>

NORTHERN BAHAMAS (INCLUDING GRAND BAHAMA, ABACO, BIMINI & ADJACENT WATERS):
