

## BAHAMAS PUBLIC FORECAST

**BAHAMAS PUBLIC FORECAST FOR THIS AFTERNOON AND TONIGHT AND THE NEXT SIX (6) DAYS, ISSUED BY THE BAHAMAS DEPARTMENT OF METEOROLOGY AT 12:00 P.M. EDT, SUNDAY, JUNE 14, 2026. THE NEXT SCHEDULED FORECAST WILL BE ISSUED AT 6:00 P.M. EDT.**

### WARNING IN EFFECT:

*There are no public warnings in effect at this time. For marine information, please view our Marine Forecast on our website, [met.gov.bs](http://met.gov.bs).*

The northern extent of a tropical wave currently moving across Cuba will interact with a mid to upper level disturbance hovering over the area, triggering instances of heavy showers and locally severe thunderstorms that will gradually move northward up the island chain throughout the period. Expect conditions to become more stable across the southern islands by this evening in the wake of the wave, due to building high pressure and the presence of Saharan Dust.

### GENERAL SITUATION:

**Outlook:** Conditions across the southern portion of the island chain are forecast to improve by Monday as the mid-to upper-level disturbance weakens. Meanwhile, moisture associated with the wave is expected to spread into the Northern Bahamas, leading to higher shower chances across those islands before gradually moving north of the island chain. For the remainder of the work week, ridging will remain established across the country through, resulting in warm and humid conditions with some isolated afternoon showers remaining possible. Winds are expected to strengthen to moderate to fresh as high pressure builds across the region.

**Severe Weather Potential:** There is a *slight* risk of the development of a few strong to severe thunderstorms over portions of the **Northwest and Central Bahamas**. *The public is urged to remain updated on all severe weather warnings issued by the Bahamas Department of Meteorology.*

**Heat and UV Index:** Members of the public across **The Northern and Northwest Bahamas** are advised to remain hydrated, wear protective clothing and sunscreen and seek shaded areas while outside during peak sunshine hours (**11am – 4pm**), as UV indices are expected to be in the *very high* range and heat indices may reach the *lower triple digits*.

### SPECIAL WEATHER NOTES:

**Rip Currents:** A *slight* to *moderate* risk of rip currents exists along Atlantic-exposed beaches of the island chain. *Beachgoers, particularly those in the Southeast Bahamas, should exercise caution when entering the water.*

**Flooding:** There is a *moderate risk* of flooding occurring in low-lying, flood prone and urban areas during heavy rainfall events. The public is urged to exercise caution while traversing these areas. Coastal residents are advised that there is a *marginal risk* of coastal flooding during **evening high tides** through to Thursday.
