

BAHAMAS PUBLIC FORECAST

BAHAMAS PUBLIC FORECAST FOR THIS AFTERNOON, NIGHT AND THE NEXT SIX (6) DAYS, ISSUED BY THE BAHAMAS DEPARTMENT OF METEOROLOGY AT 12:00 P.M. EDT, SUNDAY, APRIL 5, 2026. THE NEXT SCHEDULED FORECAST WILL BE ISSUED AT 6:00 P.M. EST.

WARNING IN EFFECT:	<p><i>There are no public warnings in effect at this time.</i></p> <p>A Near Gale Warning (28 – 33 knots) remains in effect for the Northwest, Central and Southeast Bahamas until 11 pm Sunday night. Boaters are urged to remain in port. For additional marine information, please view our Marine forecast on our website, met.gov.bs.</p>
GENERAL SITUATION:	<p>A low level trough is drifting north across the Southeast Bahamas and is expected to deepen into an area of low pressure as it crosses into the Central Bahamas tonight. Meanwhile, the high pressure system continues to weaken as it drifts eastward across the islands.</p> <p>Outlook: The low to mid-level disturbance will maintain an elevated chance of shower and thunderstorm activity through Monday before gradually moving out of the area on Tuesday. Winds across the island chain will eventually subside on Monday and Tuesday. By late Tuesday night or early Wednesday, a pre-frontal trough is expected to approach the Northern Bahamas producing another round of showers, thunderstorms and potentially strong to gale force breezes along with very rough seas over the Northern Bahamas and Gulf Stream waters into mid-week. However, that front is expected to stall just north of the area.</p>
SPECIAL WEATHER NOTES:	<p>Thunderstorm Activity: There is a marginal to moderate risk for strong to possibly severe thunderstorm activity across the portions of the Central Bahamas today. The public should monitor for the issuance of any severe weather watches or warnings from The Bahamas Department of Meteorology.</p> <p>Coastal Flooding – Overtopping Waves: There is a moderate to high risk of overtopping waves along seawalls and coastal roads along Atlantic-exposed shorelines. A marginal risk of coastal flooding remains across all other northern and eastern-facing coastal roadways, mainly in the Central and Southeast Bahamas especially during high tide. Motorists and residents are urged to exercise extreme caution while traversing these areas.</p> <p>Flash Flooding: There is a marginal risk of ponding, mainly in low-lying and flood-prone areas, across portions of the Northwest, Central and Southeast Bahamas through tonight. The public is urged to exercise caution in these areas, especially during heavy and prolonged rainfall events.</p> <p>Rip Currents – Rough Surf: A high risk of dangerous, life-threatening rip currents and rough surf remains along all Atlantic-exposed beaches and all area waters of the Central and Southeast Bahamas, while a moderate risk exists over the sheltered northern territorial waters. Beachgoers and swimmers should avoid entering the water along all northern, eastern and Atlantic-exposed shorelines.</p>
