

## BAHAMAS PUBLIC FORECAST

BAHAMAS PUBLIC FORECAST FOR THIS AFTERNOON, NIGHT AND THE NEXT SIX (6) DAYS, ISSUED BY THE BAHAMAS DEPARTMENT OF METEOROLOGY AT 12:00 P.M. EDT, WEDNESDAY, APRIL 29, 2026. THE NEXT SCHEDULED FORECAST WILL BE ISSUED AT 6:00 P.M. EST.

### WARNING IN EFFECT:

*There are no public warnings in effect at this time.*

*For marine information, please view our Marine Forecast at our website, [met.gov.bs](http://met.gov.bs).*

A ridge of high pressure is supporting gentle to moderate winds and light passing showers over most of the archipelago, while a dissipating frontal boundary generate more frequent shower activity over the Central Islands.

### GENERAL SITUATION:

**Outlook:** High pressure is expected to remain across the area through late Thursday or early Friday when a front will move near the Northern Bahamas producing some shower activity across that area. That frontal boundary is expected to stall just north of the area. However on Sunday, another stronger front is expected to slide into the Northern islands producing widespread showers and thunderstorms. This wet weather pattern will spread into the Northwest Bahamas through Monday, and the Central islands by Tuesday as the front moves southeastward.

**Rip Currents:** A **slight** risk of rip currents exists along Atlantic-exposed beaches of the island chain. **Beachgoers are advised to exercise caution.**

### SPECIAL WEATHER NOTES:

**Heat and UV Index:** The public is advised to remain hydrated, wear protective clothing and sunscreen and seek shaded areas while outside during peak sunshine hours (**10am – 3pm**), as UV indices are expected to be in the **high to extreme** range, and heat indices reach into the **mid 90's**.
