

BAHAMAS PUBLIC FORECAST

FORECASTS FOR THE BAHAMAS FOR TODAY, TONIGHT AND THE NEXT SIX (6) DAYS, ISSUED BY THE BAHAMAS DEPARTMENT OF METEOROLOGY AT 6:00 A.M. EDT, Wednesday, April 22, 2026. THE NEXT SCHEDULED FORECAST WILL BE ISSUED AT 12:00 P.M. EDT.

<p>WARNING IN EFFECT:</p>	<p><i>There are no public warnings in effect at this time.</i></p> <p><i>A Near Gale Warning (28 – 33 knots) is in effect for the Central and Southeast Bahamas until 6pm.</i></p> <p><i>A Near Gale Watch is in effect for the Northwest Bahamas.</i></p> <p><i>For additional marine information, please view our marine forecast on our website, met.gov.bs.</i></p>
<p>GENERAL SITUATION:</p>	<p>A weakening frontal boundary near the Southeast Bahamas will support pockets of isolated shower and thunderstorm activity across that area today. Behind it, relatively cooler temperatures and stable conditions prevail due to high pressure and a drier air mass. Meanwhile, fresh to strong breezes and rough seas will persist across the country with wind gusts anticipated to reach near gale force over the Central and Southeastern islands.</p> <p>Outlook: The front will continue to weaken and gradually move out of the area later tonight, though it is expected to linger just south of the region through the remainder of the workweek. High pressure will build across most of the country on Thursday, contributing to pleasant weather conditions as winds and seas gradually subside. However, a few passing showers remain possible as Atlantic moisture continues to stream across the area on the breeze. By Friday evening, a mid-to upper-level disturbance, along with deep tropical moisture moving in from the Gulf, will bring increasing showers and isolated thunderstorms across the Central and Southeast Bahamas, as well as portions of the Northwest Bahamas, through Saturday before exiting the area by Saturday afternoon. Expect increasingly favorable marine conditions this weekend, especially after the passage of the disturbance, as winds become light to gentle along with smooth seas.</p>
<p>SPECIAL WEATHER NOTES:</p>	<p>Rip Currents and Rough Surf: A high risk of dangerous, life-threatening rip currents and rough surf persists along all Atlantic-exposed beaches and passages across the island chain. <i>Beachgoers and swimmers should avoid entering the water along all windward and Atlantic-exposed shorelines, while mariners, especially small craft operators, should remain in port.</i></p> <p>Coastal Flooding: There is the potential for coastal flooding as seas build during high tide along all Atlantic exposures. Pedestrians and motorists should exercise caution along coastal roads and sea walls.</p>
