| <b>WARNING IN EFFECT:</b>     | <i>There are currently no public warnings in effect at this time. A <b>Near Gale Warning</b> (28 – 33 knots) remains in effect for the Northwest, Central and Southeast Bahamas. A <b>Near Gale Watch</b> remains in effect for the Northern Bahamas. For additional marine information, please view our Marine forecast on our website, <a href="http://met.gov.bs">met.gov.bs</a>.</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>GENERAL SITUATION:</b>     | <p>A mid- to upper-level disturbance continues to move eastward across the islands supporting cloudy skies, showers and possible thunderstorms. Most of the showers are anticipated across the Central and Southeastern islands tonight and tomorrow. A surface high pressure system continues to generate fresh to strong breezes.</p> <p><b>Outlook:</b> The mid to upper level disturbance will remain over the southern portion of the Bahamas, elevating the severe weather potential and flood risk through Sunday. The public is urged to remain updated on all severe weather warnings issued by the Bahamas Department of Meteorology during this time.</p> <p>Conditions will begin to improve briefly across the Bahamas beginning late Sunday through to Monday, as the upper level system drifts eastwards into the Atlantic, while the wind field gradually relaxes. By Tuesday afternoon, a frontal boundary will approach the Northern Bahamas, introducing another round of showers, thunderstorms and potentially strong to gale force breezes, before stalling near the Northwest Bahamas by mid-week.</p> |
| <b>SPECIAL WEATHER NOTES:</b> | <p><b>Coastal Flooding – Overtopping Waves:</b> There is a <b>moderate</b> to <b>high risk</b> of overtopping waves along seawalls and coastal roads along Atlantic-exposed shorelines. A <b>marginal risk</b> of coastal flooding remains across all other northern and eastern-facing coastal roadways, mainly in the Central and Southeast Bahamas especially during high tide. <i>Motorists and residents are urged to exercise extreme caution while traversing these areas.</i></p> <p><b>Rip Currents – Rough Surf:</b> A <b>high risk</b> of dangerous, life-threatening rip currents and rough surf remains along all Atlantic-exposed beaches and all area waters of the Central and Southeast Bahamas, while a <b>moderate risk</b> exists over the sheltered northern territorial waters. <i>Beachgoers and swimmers should avoid entering the water along all northern, eastern and Atlantic-exposed shorelines.</i></p>                                                                                                                                                                                         |
