

BAHAMAS PUBLIC FORECAST

FORECASTS FOR THE BAHAMAS, ISSUED BY THE BAHAMAS DEPARTMENT OF METEOROLOGY AT 6:00 A.M. EDT, Friday, October 30, 2026, FOR TODAY, TONIGHT AND THE NEXT SIX (6) DAYS. THE NEXT SCHEDULED FORECAST WILL BE ISSUED AT 12:00 P.M. EDT.

WARNING IN EFFECT:

There are no public warnings in effect at this time.

An exiting upper-trough interacting with residual tropical moisture across the Southeast Bahamas will trigger some isolated shower or thunderstorm activity today over that area. Meanwhile, a weakened stationary frontal boundary rests across the Northwest Bahamas with little fanfare as drier air and ridging dominates aloft. Meanwhile, surface high pressure to the distant north extends a ridge across the Northern Bahamas contributing to moderate to locally fresh breezes across that region while a weak pressure pattern exists across the remainder of the archipelago, supporting mainly light to gentle winds. Expect moderate to locally rough seas across Atlantic and Gulfstream waters of the Northern Bahamas with swell conditions persisting nearshore while slight to moderate seas exist elsewhere.

GENERAL SITUATION:

Outlook: High pressure building behind the front will act to strengthen winds and build seas, resulting in hazardous marine conditions through Sunday. Winds should gradually ease late Monday while rough seas and large swell conditions persist along Atlantic exposed and Gulfstream waters of the northern half of the country into early next week. A shortwave trough pushing into the southeastern US will increase cloud cover and elevate the severe weather potential across the northern islands, as it interacts with a moisture surge from a tropical wave approaching from the west. The boundary is then expected to weaken across the area while lifting northwards by Monday, as associated troughing and moisture maintains a wet and cloudy weather pattern through to midweek. A low may form along this retreating front to the northeast of the area, drawing most of the moisture into the Atlantic. A drier air mass will then infiltrate the northern territories ahead of the passage of a reinforcing cold front moving in from the US by the end of the work week.

Rip Currents: There remains a **high risk** of rip currents along all coastal waters of the island chain. **Swimmers are strongly advised not to enter the waters at this time.**

SPECIAL WEATHER NOTES:

Coastal and Tidal Flooding: The highest tides of the year, combined with large swells, bring a **slight** to **moderate** risk of coastal and tidal flooding along shorelines and marshland areas through the weekend.
