|------------------------|--|
| WARNING IN EFFECT:     | <p>There are no public warnings in effect at this time.</p> <p><i>For additional marine information, please view our marine forecast on our website, <a href="http://met.gov.bs">met.gov.bs</a>.</i></p>   |
| GENERAL SITUATION:     | <p>The country is currently under the influence of a tight pressure gradient, supported by a strong Atlantic high-pressure system to the northeast and a deepening low-pressure system across the southeastern United States. The combination of these two features is generating fresh to locally strong winds, with occasional gusts reaching <b>near gale</b> force, particularly across the northern and southern extremes of the archipelago. Meanwhile, low-level moisture along the western periphery of the high-pressure ridge is contributing to the development of isolated fast-moving showers across the island chain.</p> <p><b>Outlook:</b> A cold front, accompanied by scattered showers and isolated thunderstorms, is expected to enter the Northern islands on Monday. The front will quickly move through the island chain and reach the Southeastern islands by Tuesday. High pressure will build across the archipelago by mid-week, contributing once again to more stable weather conditions.</p> |
| SPECIAL WEATHER NOTES: | <p><b>Rip Currents:</b> There is a <b>moderate to high risk</b> of <b>dangerous, life-threatening rip currents and rough surf</b> exists along all Atlantic exposed shorelines of the island chain. <i><b>Beachgoers and swimmers are strongly advised to avoid entering the water in these areas.</b></i></p>   |
