

BAHAMAS PUBLIC FORECAST

FORECASTS FOR THE BAHAMAS, ISSUED BY THE BAHAMAS DEPARTMENT OF METEOROLOGY AT 6:00 A.M. EDT, Sunday, September 13, 2026, FOR TODAY, TONIGHT AND THE NEXT SIX (6) DAYS. THE NEXT SCHEDULED FORECAST WILL BE ISSUED AT 12:00 P.M. EDT.

WARNING IN EFFECT:

*A **Dust Advisory** is in effect for the Central and Southeast Bahamas along with the Turks and Caicos Islands and will include the Northwest Bahamas by 7am on Sunday. Sensitive individuals, including those with respiratory and heart issues, young children and the elderly, should take precautionary measures to safeguard their health.*

High pressure ridging continues to support moderate winds and drier conditions over the majority of the country, as lingering troughing produces showers with thunderstorm activity over the Northern Bahamas. A layer of Saharan dust spreading northward continues to create hazy skies while aiding in limiting shower chances.

GENERAL SITUATION:

Outlook: Hazy skies and decreased shower activity will continue across the country through the middle of the week when a cold front will sag south across the United States anchoring its pre-frontal trough over the Northern Islands. This will result in an increase in the potential for severe weather across the Northern, Northwest Bahamas and parts of the Central Islands through Thursday. The trough across the Northern Islands will weaken by Friday allowing high pressure to build over the area during the coming weekend.

SPECIAL WEATHER NOTES:

Rip Currents: There is a **moderate** to **high** risk of rip currents on the eastern coastal waters of the **Central and Southeast Bahamas**. There is a **slight** risk of rip currents on the eastern coastal waters elsewhere across the archipelago. *Therefore, swimmers and beachgoers are urged to remain onshore while visiting eastern, southern and Atlantic beaches of the Central and Southeast Bahamas, and should exercise caution elsewhere.*
