

BAHAMAS PUBLIC FORECAST

FORECASTS FOR THE BAHAMAS FOR TODAY, TONIGHT AND THE NEXT SIX (6) DAYS, ISSUED BY THE BAHAMAS DEPARTMENT OF METEOROLOGY AT 6:00 A.M. EST, Wednesday, December 17, 2025. THE NEXT SCHEDULED FORECAST WILL BE ISSUED AT 12:00 P.M. EST.

WARNING IN EFFECT:	No public warnings in effect at this time. For marine warnings and conditions, please see the Marine Forecast @ met.gov.bs
GENERAL SITUATION:	<p>A weakening frontal boundary will continue to generate showers and very isolated thunderstorms across the Southeast and portions of the Central Bahamas today, with activity gradually tapering off through tonight. Winds will remain gentle to fresh as high-pressure ridging strengthens across the island chain.</p> <p>Outlook: As high pressure to the north continues to shift further east into the Atlantic, drier and more stable conditions will prevail. However, a few shallow trade-wind showers are possible as this ridging pattern draws in Atlantic moisture ahead of the weekend. By the weekend, a weak cold front is expected to enter the Northern Bahamas before stalling across the Central Bahamas on Sunday. A reinforcing frontal boundary is forecast to follow on Monday, with robust high pressure building in its wake and tightening the pressure gradient, resulting in strong to gale-force breezes.</p>
SPECIAL WEATHER NOTES:	<p>Rip Currents: There remains a high risk of life-threatening rip currents and rough surf along all Atlantic beaches. Hazardous rip currents may be found along north and east coasts beaches in sheltered areas. Beachgoers and swimmers are strongly advised to not enter these waters.</p> <p>Coastal Threats: There remains a threat of minor coastal flooding and beach erosion along eastern coastal areas. Large, overtopping waves and windblown sand is likely, and can prove hazardous to motorists and pedestrians. Therefore, it is advised that extreme caution is exercised while traversing these areas, especially the Glass Window Bridge in Eleuthera.</p>
