

BAHAMAS PUBLIC FORECAST

BAHAMAS PUBLIC FORECAST FOR TONIGHT AND THE NEXT SIX (6) DAYS, ISSUED BY THE BAHAMAS DEPARTMENT OF METEOROLOGY AT 6:00 P.M. EDT, Friday, October 2, 2026. THE NEXT SCHEDULED FORECAST WILL BE ISSUED AT 6:00 A.M. EDT TOMORROW.

WARNING IN EFFECT: *There are no public warnings in effect at this time.*

High pressure ridging will remain established across the island chain tonight, with occasional passing showers possible through Saturday as Atlantic moisture continues to stream across the area. Breezes will remain moderate to fresh across most of the country through Saturday.

GENERAL SITUATION: *Outlook:* Over the weekend, a high-pressure ridge will remain across the island chain, supporting generally favorable weather as moisture and cloud cover gradually move away from the area. A drier airmass will also spread across the islands, helping to limit the development of showers and thunderstorms. However, an upper-level disturbance is expected to move across the Southeastern islands late Sunday, increasing shower and thunderstorm activity there. Heading into the workweek, the disturbance will move away from the Southern islands by Monday, while weak high pressure remains in place. By Tuesday, a frontal boundary is expected to move into South Florida near the Northern islands, bringing increased cloudiness and shower activity to the area.

Rip Currents: There is a *moderate* to *high* risk of rip currents across all Atlantic waters. *Beachgoers and swimmers are urged to exercise caution.*

SPECIAL WEATHER NOTES: **Coastal Flooding:** Seasonal high (king) tides may produce minor coastal flooding of low-lying coastal roads and shorelines across The Bahamas near times of high tide today. *Coastal residents and road users are urged to exercise caution while traversing these roads.*
