

BAHAMAS PUBLIC FORECAST

BAHAMAS PUBLIC FORECAST FOR TONIGHT, TOMORROW AND THE NEXT SIX (6) DAYS, ISSUED BY THE BAHAMAS DEPARTMENT OF METEOROLOGY AT 6:00 P.M. EDT, Saturday, September 13, 2025. THE NEXT SCHEDULED FORECAST WILL BE ISSUED AT 6:00 A.M. EDT TOMORROW.

WARNING IN EFFECT:	<i>A severe weather watch remains in effect for the Northern and Northwest Bahamas through tonight. The public is asked to keep updated on all severe weather warnings issued by the Bahamas Department of Meteorology.</i>
GENERAL SITUATION:	<p>A stationary frontal boundary currently over the Northwest Bahamas along with a weak area of low pressure, northeast of the area, will maintain showers and thunderstorms across those areas through the forecast period. Meanwhile, light to gentle winds associated with weak high pressure will continue to dominate the weather elsewhere.</p> <p><i>Outlook:</i> The frontal boundary will lift northward and gradually weaken through the remainder of the weekend. However, instability associated with multi-layered troughing will remain across the northern half of the country meanwhile pockets of drier air will filter in tapering rainfall activity. Nevertheless, tropical moisture will remain sufficient to support isolated showers and thunderstorms heading into the new week. Light to gentle winds will persist through the early part of the week, increasing to moderate strength by midweek.</p>
SPECIAL WEATHER NOTES:	<p><i>Flash Flood Risk:</i> Flash flooding is possible in low lying and flood prone areas during heavy or prolonged rainfall events as well as areas already inundated with water.</p> <p><i>Heat/UV Index:</i> Residents, particularly those in the Southeast Bahamas, are advised to remain hydrated, wear protective clothing, such as wide-brimmed hats, sunglasses, and sunscreen, and to seek shaded areas during peak daylight hours due to heat indices reaching into the lower triple digits and UV levels in the high to extreme range.</p>

TROPICAL WEATHER OUTLOOK:	A tropical wave located near the Cabo Verde Islands is producing a large area of disorganized shower and thunderstorm activity over the far eastern Atlantic. Dry and stable air will likely limit this system's development over the next few days, but a tropical depression could form by the middle to latter part of next week. Formation chance through 7 days...medium...50 percent.
