

BAHAMAS PUBLIC FORECAST

BAHAMAS PUBLIC FORECAST FOR TONIGHT, TOMORROW AND THE NEXT SIX (6) DAYS, ISSUED BY THE BAHAMAS DEPARTMENT OF METEOROLOGY AT 6:00 P.M. EDT, Sunday, June 7, 2026. THE NEXT SCHEDULED FORECAST WILL BE ISSUED AT 6:00 A.M. EDT TOMORROW.

WARNING IN EFFECT:

There are no public warnings in effect at this time. For additional marine information, please view our Marine Forecast on our website, met.gov.bs.

Deep layered troughing along with rich tropical moisture will maintain an unsettled weather pattern across the Southeast Bahamas tonight through tomorrow. Elsewhere, a drier air mass and weak ridging will keep weather conditions rather stable though daytime heating will trigger isolated shower activity tomorrow afternoon. Gentle to moderate breezes will prevail.

GENERAL SITUATION:

Outlook: Troughing and tropical moisture will persist over the Southeast through midweek, maintaining an elevated chance for showers and thunderstorms across that region. By late Wednesday, the trailing end of another frontal boundary may approach the area as a tropical wave passes south of the island chain. The interaction of these features could lead to an increase in shower and thunderstorm activity through the latter part of next week.

Severe Weather Potential: There is a *slight* to *moderate* risk of the development of strong to severe thunderstorms over portions of the **Southeast Bahamas** tonight through tomorrow. *The public is urged to remain updated on all severe weather warnings issued by the Bahamas Department of Meteorology.*

Flooding: There is a *slight* to *moderate* risk of localized flooding over portions of the **Southeast Bahamas** during heavy and prolonged rainfall events. *Residents should monitor conditions and are urged to exercise caution when traversing in low-lying, flood-prone and urban areas during such events.*

SPECIAL WEATHER NOTES:

UV Index: The public is advised to remain well-hydrated and exercise caution while outdoors during *peak sunshine hours (11am-3pm) tomorrow* across the **Northern and Northwest Bahamas** as UV indices are expected to be in the *very high* range.

Rip Currents: There is a *slight* to *moderate* risk of rip currents affecting ALL Atlantic exposures. *Beachgoers and swimmers are urged to exercise caution.*
