

BAHAMAS PUBLIC FORECAST

BAHAMAS PUBLIC FORECAST FOR TONIGHT AND THE NEXT SIX (6) DAYS, ISSUED BY THE BAHAMAS DEPARTMENT OF METEOROLOGY AT 6:00 P.M. EDT, Tuesday, October 6, 2026. THE NEXT SCHEDULED FORECAST WILL BE ISSUED AT 6:00 A.M. EDT TOMORROW.

WARNING IN EFFECT: *There are currently no warnings in effect at this time.*

A quasi-stationary frontal boundary across Florida is forecast to shift slightly southward tonight, increasing cloudiness along with shower and thunderstorm chances across the Northern Bahamas during the overnight hours. Meanwhile, a gentle to moderate wind regime will continue to stream low level moisture over the country maintaining pockets of passing showers across the archipelago.

GENERAL SITUATION: **Outlook:** Moisture will remain trapped south of the boundary, enhancing shower and thunderstorm chances through mid-week. Pre-frontal troughing will keep activity slightly elevated across the northernmost islands, while surges in moisture from a tropical wave moving south of the Bahamas will bring another round of showers while strengthening winds by early Friday. Rain chances will decrease across most of the islands by the weekend, as high pressure builds while a tropical system in the Gulf of Mexico draws moisture away from the area. Mostly fair weather will persist across most areas into early next week.

SPECIAL WEATHER NOTES: **Rip Currents:** There is a *slight* risk of rip currents across all Atlantic-exposed waters. *Beachgoers and swimmers are advised to exercise caution when entering the water.*
