

BAHAMAS PUBLIC FORECAST

BAHAMAS PUBLIC FORECAST FOR TONIGHT, TOMORROW AND THE NEXT SIX (6) DAYS, ISSUED BY THE BAHAMAS DEPARTMENT OF METEOROLOGY AT 6:00 P.M. EDT, Tuesday, October 27, 2026. THE NEXT SCHEDULED FORECAST WILL BE ISSUED AT 6:00 A.M. EDT TOMORROW.

WARNING IN EFFECT:

*A **Near Gale Watch** in effect for the Northern Bahamas and their adjacent waters, along with the Northwest Providence Channel and the Gulf Stream, through tonight. Mariners, especially small craft operators, are advised to remain in port. Swimmers are advised to remain on shore until further notice.*

GENERAL SITUATION:

A low pressure area is weakening and drifting southwestward over the Bahamas, diminishing the strong winds over the Northern Islands tonight into Wednesday. The frontal boundary will continue to meander over the Northern and Northwest Islands maintaining shower activity across the islands. The surface trough across the Southern islands will migrate east allowing a much dryer airmass to move into the Central and Southeast Bahamas tomorrow.

Outlook: Lingering troughing keeps an elevated chance of showers and thunderstorms through Thursday, mainly over the southern islands. Winds become light and variable across most islands from Thursday as drier air and building high pressure bring more settled weather into the weekend. Northeast swells continue to affect Atlantic-exposed waters through the end of the week.

Flooding: There is a **moderate to high** risk of flooding in the **Northwest and Southeast Bahamas** during heavy or prolonged rain. *Avoid low-lying, flood-prone and already flooded areas.*

Rip Currents: There is a **high** risk of dangerous, life-threatening rip currents along all coastlines, including Atlantic shores of the island chain. *Beachgoers should stay out of the water.*

Coastal and Tidal Flooding: The highest tides of the year, combined with large swells, bring a **moderate** risk of coastal and tidal flooding along shorelines and marshland areas through Wednesday. Large north to northeast swells may cause waves to overtop seawalls and coastal roads near high tide along north- and east-facing coasts of the Northern and Northwest Bahamas. *Use caution on coastal roads, including the Glass Window Bridge in Eleuthera.*

SPECIAL WEATHER NOTES:

NORTHERN BAHAMAS

(INCLUDING GRAND BAHAMA, ABACO, BIMINI & ADJACENT WATERS):

SKY CONDITIONS: Partly cloudy tonight, becoming a mix of sun and clouds tomorrow.
PRECIPITATION: 20 to 30% chance of showers and isolated thunderstorms.
