

BAHAMAS PUBLIC FORECAST

BAHAMAS PUBLIC FORECAST FOR THIS AFTERNOON, TONIGHT AND THE NEXT SIX (6) DAYS, ISSUED BY THE BAHAMAS DEPARTMENT OF METEOROLOGY AT 12:00 P.M. EDT, THURSDAY, JUNE 25, 2026. THE NEXT SCHEDULED FORECAST WILL BE ISSUED AT 6:00 P.M. EDT.

WARNING IN EFFECT:

Heat Advisory remains in effect for the Northern and portions of the Northwest Bahamas (inclusive of the islands of Grand Bahama, Bimini, Abaco and The Berry Islands). Dust Advisory in effect for all areas of The Bahamas due to moderate Saharan dust concentrations. Moderate to high risk of rip currents for Atlantic and east to southeastern coastlines.

Lingering moisture across the country will generate some showers and thunderstorms weakening through the evening and tonight as Saharan Dust again invades the islands. The dust will assist in suppressing shower activity as we approach weekend, and high pressure rebuilds over the Islands. Hot and hazy conditions will occur throughout the island chain, remaining breezy in the Central and Southeast Bahamas.

GENERAL SITUATION:

Outlook: Another plume of Saharan dust embedded within a strengthening high-pressure system will become established across the region heading into the weekend. By late Sunday, an upper-level low and approaching frontal boundary may increase cloud cover and modestly enhance shower and thunderstorm potential across portions of the Bahamas.

SPECIAL WEATHER NOTES:

- Saharan Dust: Moderate Saharan dust concentrations will affect all areas, reducing visibility and impacting air quality. Residents, especially those with respiratory conditions, should take necessary precautions.
- Rip Currents: Moderate to high risk of rip currents for Atlantic and east to southeastern coastlines. Beachgoers are urged to exercise caution.
- UV Index: Very high to extreme range during peak sunshine hours (11am - 4pm). Wear protective clothing and sunscreen, seek shaded areas.
