Time Difference

To determine the time of high water or low water at any station listed in this table, given in the columns headed "Differences", are times in hours and minutes to be added to or subtracted from the time of high or low water at some reference station. A plus (+) sign indicates that the tide at the subordinates station is later than at the reference station and the difference should be added; a minus (-) sign indicates that it is earlier and should be subtracted.

To obtain the tide at a subordinate station on any date, apply the difference to the tide at the reference station for that same date. In some cases, however, to obtain an a.m. tide, it may be necessary to use the preceding day's p.m. tide at the reference station; or to obtain a p.m. tide, it may be necessary to use the following day's a.m. tide.
